Fall 2010

Mark Woodard (Furman U)

<ロ> (日) (日) (日) (日) (日)

Outline

- 1 Some problems to set the stage
- 2 The proper definition
- 3 The geometric series
- 4 Telescoping series
 - 5 The harmonic series
- 6 A test for divergence
- Some useful theorems on series

Evaluate the following infinite sums:

Evaluate the following infinite sums:

•
$$S = 1 + \frac{1}{2} + \frac{1}{4} + \frac{1}{8} + \cdots$$

Evaluate the following infinite sums:

•
$$S = 1 + \frac{1}{2} + \frac{1}{4} + \frac{1}{8} + \cdots$$

• $S = 1 + 2 + 4 + 8 + \cdots$

Evaluate the following infinite sums:

•
$$S = 1 + \frac{1}{2} + \frac{1}{4} + \frac{1}{8} + \cdots$$

• $S = 1 + 2 + 4 + 8 + \cdots$
• $S = 1 + (-1) + 1 + (-1) + \cdots$

Evaluate the following infinite sums:

•
$$S = 1 + \frac{1}{2} + \frac{1}{4} + \frac{1}{8} + \cdots$$

• $S = 1 + 2 + 4 + 8 + \cdots$
• $S = 1 + (-1) + 1 + (-1) + \cdots$

Commentary

The preceding examples underscore the need for a proper definition of the sum of an infinite series.

.

()

996

• Given a sequence {*a_n*} of real numbers, we form a new sequence as follows:

 $s_1 = a_1$ $s_2 = a_1 + a_2$ $s_3 = a_1 + a_2 + a_3$

The sequence $\{s_n\}$ is called the sequence of partial sums.

イロト 不得 トイヨト イヨ

• Given a sequence $\{a_n\}$ of real numbers, we form a new sequence as follows:

 $s_1 = a_1$ $s_2 = a_1 + a_2$ $s_3 = a_1 + a_2 + a_3$

The sequence $\{s_n\}$ is called the *sequence of partial sums*.

• If $s_n \to L$, then we say that the infinite series $\sum_{k=1}^{\infty} a_k$ converges and we write

$$\sum_{k=1}^{\infty} a_k = L.$$

If $\{s_n\}$ diverges, then we say that the infinite series $\sum_{k=1}^{\infty} a_k$ diverges.

A series $\sum a_n$ is a collection of two sequences: the sequence of terms $\{a_n\}$ and the sequence of partial sums $\{s_n\}$ where $s_n = a_1 + a_2 + \cdots + a_n$.

(本語)と 本語(と) 本語(と

Determine whether or not the series $\sum_{k=1}^{\infty} (-1)^{k+1}$ converges.

Determine whether or not the series $\sum_{k=1}^{\infty} (-1)^{k+1}$ converges.

Solution

(日) (四) (王) (王) (王)

Determine whether or not the series $\sum_{k=1}^{\infty} (-1)^{k+1}$ converges.

Solution

• Let s_n denote the nth partial sum of the series. It is easy to see that $s_n = 1$ if n is odd and $s_n = 0$ if n is even.

Determine whether or not the series $\sum_{k=1}^{\infty} (-1)^{k+1}$ converges.

Solution

- Let s_n denote the nth partial sum of the series. It is easy to see that $s_n = 1$ if n is odd and $s_n = 0$ if n is even.
- Since the sequence 0, 1, 0, 1, ... does not converge, the infinite series $\sum_{k=1}^{\infty} (-1)^{k+1}$ diverges.

過 ト イヨ ト イヨト

Let $a, r \neq 0$. Any series of the form

$$\sum_{k=1}^{\infty} ar^{k-1} = a + ar^1 + ar^2 + ar^3 + \cdots$$

is called a *geometric series*. The number r is called the *common ratio* of the series.

A B A A B A

Let $a, r \neq 0$. Any series of the form

$$\sum_{k=1}^{\infty} ar^{k-1} = a + ar^1 + ar^2 + ar^3 + \cdots$$

is called a *geometric series*. The number r is called the *common ratio* of the series.

Theorem

$$\sum_{k=1}^{\infty} ar^{k-1} \begin{cases} = \frac{a}{1-r} & \text{if } |r| < 1 \\ \text{diverges} & \text{if } |r| \ge 1 \end{cases}$$

Evaluate the series $\sum_{k=1}^{\infty} 5(1/3)^{k+2}$.

▲□▶ ▲圖▶ ▲厘▶ ▲厘≯

Evaluate the series $\sum_{k=1}^{\infty} 5(1/3)^{k+2}$.

Solution

The series

$$5(1/3)^3 + 5(1/3)^4 + 5(1/3)^5 + \cdots$$

is geometric with a = 5/27 and r = 1/3. Thus the series converges to

$$\frac{(5/27)}{1-(1/3)} = \frac{5}{18}$$

A certain super ball has the property that it will always return to 60 percent of the maximum height of the previous bounce. If a ball is dropped from 20 feet, how far will it fall?

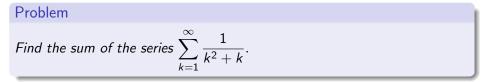

- 4 同 6 4 日 6 4 日 6

A certain super ball has the property that it will always return to 60 percent of the maximum height of the previous bounce. If a ball is dropped from 20 feet, how far will it fall?

Solution

The total distance is the infinite series

$$20 + \underbrace{2(.6)(20) + 2(.6)^{2}(20) + 2(.6)^{3}(20) + \cdots}_{geometric \ part}$$
$$= 20 + \frac{24}{1 - .6}$$
$$= 20 + 60$$
$$= 80$$

イロト イヨト イヨト イヨト

Problem Find the sum of the series $\sum_{k=1}^{\infty} \frac{1}{k^2 + k}$. Solution

<ロ> (日) (日) (日) (日) (日)

Problem Find the sum of the series $\sum_{k=1}^{\infty} \frac{1}{k^2 + k}$.

Solution

• By a partial fraction decomposition, $\frac{1}{k^2+k} = \frac{1}{k} - \frac{1}{k+1}$.

イロト イ理ト イヨト イヨト 二日

Find the sum of the series \sum

$$\sum_{k=1}^{\infty} \frac{1}{k^2 + k}.$$

Solution

• By a partial fraction decomposition, $\frac{1}{k^2+k} = \frac{1}{k} - \frac{1}{k+1}$.

 ∞

• Thus it can be shown that $s_n = 1 - \frac{1}{n+1}$.

Find the sum of the series $\sum_{k=1}^{\infty} \frac{1}{k^2 + k}$.

Solution

- By a partial fraction decomposition, $\frac{1}{k^2+k} = \frac{1}{k} \frac{1}{k+1}$.
- Thus it can be shown that $s_n = 1 \frac{1}{n+1}$.
- Since $s_n \rightarrow 1$ as $n \rightarrow \infty$, we conclude that the series converges to 1.

- < A > < B > < B >

Show that the harmonic series

$$\sum_{k=1}^{\infty} \frac{1}{k} = 1 + \frac{1}{2} + \frac{1}{3} + \cdots$$

diverges.

Solution

М

		◆注≯ □ 注	~~~~
1ark Woodard (Furman U)	§12.2–Infinite series	Fall 2010	12 / 16

Solution

• Consider s₈ and observe that

$$s_8 = 1 + \frac{1}{2} + \left(\frac{1}{3} + \frac{1}{4}\right) + \left(\frac{1}{5} + \frac{1}{6} + \frac{1}{7} + \frac{1}{8}\right)$$

$$\ge 1 + \frac{1}{2} + 2\frac{1}{4} + 4\frac{1}{8}$$

$$= 1 + \frac{3}{2}$$

Solution

• Consider s₈ and observe that

$$s_8 = 1 + \frac{1}{2} + \left(\frac{1}{3} + \frac{1}{4}\right) + \left(\frac{1}{5} + \frac{1}{6} + \frac{1}{7} + \frac{1}{8}\right)$$

$$\ge 1 + \frac{1}{2} + 2\frac{1}{4} + 4\frac{1}{8}$$

$$= 1 + \frac{3}{2}$$

• In general, $s_{2^n} \ge 1 + \frac{n}{2}$, which show that $s_n \to \infty$ as $n \to \infty$.

イロト イヨト イヨト イヨト

If $a_n \not\rightarrow 0$, then the series $\sum_{n=1}^{\infty} a_n$ diverges.

(日) (周) (三) (三)

If $a_n \not\rightarrow 0$, then the series $\sum_{n=1}^{\infty} a_n$ diverges.

Proof.

Mark Woodard (Fu	ırman U)
------------------	---------	---

・ロン ・四 ・ ・ ヨン ・ ヨン

If $a_n \not\rightarrow 0$, then the series $\sum_{n=1}^{\infty} a_n$ diverges.

Proof.

• We will prove the contrapositive; namely, if the series converges, then the *n*th term converges to 0.

A B < A B </p>

If $a_n \not\rightarrow 0$, then the series $\sum_{n=1}^{\infty} a_n$ diverges.

Proof.

- We will prove the contrapositive; namely, if the series converges, then the *n*th term converges to 0.
- Let us assume that $\sum_{k=1}^{\infty} a_k$ converges and let $\{s_n\}$ denote the corresponding sequence of partial sums.

· · · · · · · · ·

If $a_n \not\rightarrow 0$, then the series $\sum_{n=1}^{\infty} a_n$ diverges.

Proof.

- We will prove the contrapositive; namely, if the series converges, then the *n*th term converges to 0.
- Let us assume that $\sum_{k=1}^{\infty} a_k$ converges and let $\{s_n\}$ denote the corresponding sequence of partial sums.
- Thus $s_n \rightarrow L$ for some limit L.

▶ < ∃ ▶ < ∃ ▶</p>

If $a_n \not\rightarrow 0$, then the series $\sum_{n=1}^{\infty} a_n$ diverges.

Proof.

- We will prove the contrapositive; namely, if the series converges, then the *n*th term converges to 0.
- Let us assume that $\sum_{k=1}^{\infty} a_k$ converges and let $\{s_n\}$ denote the corresponding sequence of partial sums.
- Thus $s_n \rightarrow L$ for some limit L.
- It is also the case that $s_{n-1} \rightarrow L$.

通 ト イヨ ト イヨト

Theorem (*n*th Term Test for Divergence)

If $a_n \not\rightarrow 0$, then the series $\sum_{n=1}^{\infty} a_n$ diverges.

Proof.

- We will prove the contrapositive; namely, if the series converges, then the *n*th term converges to 0.
- Let us assume that $\sum_{k=1}^{\infty} a_k$ converges and let $\{s_n\}$ denote the corresponding sequence of partial sums.
- Thus $s_n \rightarrow L$ for some limit L.
- It is also the case that $s_{n-1} \rightarrow L$.

• Thus
$$a_n = (s_n - s_{n-1}) \rightarrow L - L = 0$$
, as was to be shown.

< 回 ト < 三 ト < 三 ト

Does the series $\sum_{k=1}^{\infty} (1 + k^{-1})^k$ converge?

<ロ> (日) (日) (日) (日) (日)

Does the series $\sum_{k=1}^{\infty} (1 + k^{-1})^k$ converge?

Solution

Since $(1 + k^{-1})^k \rightarrow e \neq 0$, the series diverges by the nth Term Test.

Suppose that $\sum a_n$ and $\sum b_n$ are convergent series and let c be a constant. Then

Suppose that $\sum a_n$ and $\sum b_n$ are convergent series and let c be a constant. Then

•
$$\sum(a_n+b_n)=\sum a_n+\sum b_n$$

Suppose that $\sum a_n$ and $\sum b_n$ are convergent series and let c be a constant. Then

•
$$\sum(a_n+b_n)=\sum a_n+\sum b_n$$

•
$$\sum (a_n - b_n) = \sum a_n - \sum b_n$$

Suppose that $\sum a_n$ and $\sum b_n$ are convergent series and let c be a constant. Then

•
$$\sum (a_n + b_n) = \sum a_n + \sum b_n$$

•
$$\sum (a_n - b_n) = \sum a_n - \sum b_n$$

•
$$\sum ca_n = c \sum a_n$$

Problem Find the sum of the series $\sum_{k=1}^{\infty} \left(\frac{1}{k^2 + k} + 5(.5)^{k+3} \right).$

Find the sum of the series
$$\sum_{k=1}^{\infty} \left(\frac{1}{k^2 + k} + 5(.5)^{k+3} \right).$$

Solution

▲口> ▲圖> ▲屋> ▲屋>

Find the sum of the series
$$\sum_{k=1}^{\infty} \left(\frac{1}{k^2 + k} + 5(.5)^{k+3} \right).$$

Solution

• We have already observed that $\sum_{k=1}^{\infty} \frac{1}{k^2+k} = 1$.

イロン イヨン イヨン イヨン

Find the sum of the series
$$\sum_{k=1}^{\infty} \left(\frac{1}{k^2 + k} + 5(.5)^{k+3} \right).$$

Solution

- We have already observed that $\sum_{k=1}^{\infty} \frac{1}{k^2+k} = 1$.
- The series $\sum_{k=1}^{\infty} 5(.5)^{k+3} = 5/8$, being geometric.

▲ロト ▲圖ト ▲画ト ▲画ト 三直 - のへで

Find the sum of the series
$$\sum_{k=1}^{\infty} \left(\frac{1}{k^2 + k} + 5(.5)^{k+3} \right).$$

Solution

- We have already observed that $\sum_{k=1}^{\infty} \frac{1}{k^2+k} = 1$.
- The series $\sum_{k=1}^{\infty} 5(.5)^{k+3} = 5/8$, being geometric.
- Thus the original series converges to 1 + 5/8 = 13/8.

イロト 不得下 イヨト イヨト 二日
